COUNTRY LANE BERNEDOODLES

Deworming Recommendations

A veterinarian-guided parasite plan

Deworming is not one-size-fits-all. Use this guide to organize questions and follow the plan your veterinary team recommends.

Our approach

■ Puppies can carry intestinal parasites even when they look healthy. Your vet may recommend a deworming schedule and fecal testing based on age, history, and risk.

Country Lane recommendation: Keep a written record of every treatment and stool test, and share the breeder's records with your veterinarian.

Ask your veterinarian

■ Which dewormer is appropriate for my puppy's age and current weight?

■ What parasites does the chosen product treat—and which does it not treat?

■ When should the next treatment or fecal test occur?

■ Does my puppy need repeat fecal testing after treatment?

■ What should I do if I see worms, diarrhea, blood in stool, or vomiting?

Helpful habits

■ Pick up stool promptly and dispose of it safely

■ Wash hands after handling stool or cleaning the potty area

■ Keep bedding and living areas clean; follow your vet's environmental-control advice

■ Prevent scavenging and discourage eating feces or wildlife remains

■ Tell your vet about other pets, travel, wildlife exposure, and symptoms

Treatment record

Date / weight: _____ Product prescribed: _____

Directions per vet / label: _____ Given by: _____

Next due date / testing: _____

Safety: Never guess a dose, use a product intended for another species, or combine parasite products without veterinary direction.
